

## Cars-API-EFCORE

1. Create an Asp.Net Core Web API project named '**CarsAPI**'. The project target framework must be **.Net core 8**
2. Cars must have the following properties.
  - a. Id – int (Auto Generated)
  - b. Name – Required, 20 characters long
  - c. Category – Required, 50 characters long.
  - d. Price– Required, 10 characters long.
3. This application must perform all the CRUD operations.
4. All data operations must be done outside of the controller.
5. Remove unwanted files from your project.
6. Make sure that all points are tested properly using POSTMAN.

**NOTE:** All data must be stored in SQL Server using the **EFCORE Code First Approach**

**DatabaseName : CarsDB**
